This text presents a concise coverage of the essential principles of histology, particularly suitable for the shorter medical school courses in histology. Gartner and Hiatt also author the bestselling Color Atlas of Histology published by LWW. This is a widely used atlas and many of the instructors who recommend this also recommend our text. It is a very readable book, heavily illustrated with high quality, three-dimensional full colour conceptual illustrations, as well as many full colour photomicrographs and high quality black and white electron micrographs. Features an abundance of illustrations, including micrographs, diagrams, drawings, and tables that clarify essential information. Provides

clinical considerations in each chapter when appropriate. Key terms are bold face and chapter summaries alert students to important content. Features a comprehensive cross-referenced index for easy location of needed information. All chapters thoroughly updated. Many new figures and many old figures revised for better clarity. Approximately 20-25 new electronmicrographs added. More tables have been added to summarise important histological features and principles. Reduced page size for greater portability. The design now incorporates more colour, including coloured headings and tables.

About the Author Leslie P. Gartner, PhD, Associate Professor of Anatomy, Department of Oral and Craniofacial Biological Sciences, Baltimore College of Dental Surgery, Dental School, University of Maryland, Baltimore, MD; James L. Hiatt, PhD, Associate Professor of Anatomy Emeritus, Department of Oral and Craniofacial Biological Sciences, Baltimore College of Dental Surgery, Dental School, University of Maryland, Baltimore, MD
