**Penny Webb, Chris Bain, Andrew Page : Essential Epidemiology: An Introduction for Students and Health Professionals** before purchasing it in order to gage whether or not it would be worth my time, and all praised Essential Epidemiology: An Introduction for Students and Health Professionals:

Taking a practical approach and supported by global examples from all areas of health, the new edition of this popular and highly commended textbook has been updated to reflect current epidemiological thinking and teaching. Based on feedback from teachers and students, material has been reordered to better suit courses and reflect the underlying logic

and purpose of epidemiology. Provides students with a rounded picture of the field by emphasizing the commonalities across different areas of epidemiology, including clinical epidemiology, and highlighting the key role of epidemiology in public health. Avoids complex mathematics by restricting this to optional material, thereby keeping the book accessible to students from non-quantitative backgrounds. Integrated and supplementary questions help students to reinforce concepts. A wealth of online material is available at [www.cambridge.org/essential\\_epidemiology](http://www.cambridge.org/essential_epidemiology), including additional questions, advanced material for key concepts, recommendations for further reading, links to useful websites and slides for teaching, supporting both students and teachers.

**About the Author** Penny Webb is a Principal Research Fellow at the QIMR Berghofer Medical Research Institute and Honorary Professor at the School of Public Health, University of Queensland. Chris Bain is a Visiting Scientist at the Queensland Institute of Medical Research. Andrew Page is Professor of Epidemiology at the Centre for Health Research, School of Medicine, University of Western Sydney.
