Elaine N. Marieb, Susan J. Mitchell : Human Anatomy Physiology Lab Manual, Rat Version before purchasing it in order to gauge whether or not it would be worth my time, and all praised Human Anatomy Physiology Lab Manual, Rat Version:

0 of 0 people found the following review helpful. Five Stars By iris Good condition 0 of 0 people found the following review helpful. It's good, but no answers... By C. Hughes This book includes most of the important info from the textbook so it's an easier read. I wish there was an answer key though... even the instructors don't have one. I would like to know if my answers are correct.

Designed for use with any AP textbook, this best-selling laboratory manual features a wide variety of exercises and

activities to meet the needs of any anatomy physiology laboratory course. Known for its thorough, clearly-written exercises, full-color art, and tear-out review sheets, this lab manual gives you a hands-on laboratory experience. It is also accompanied by an interactive website built specifically for the AP lab course that features pre-lab and post-lab quizzes for every exercise, Practice Anatomy Lab 2.0, and PhysioEx 8.0. This new lab manual also features a brand-new art program that uses rich vibrant colors, 3D realistic rendering, and many new histology and cadaver photos.

About the AuthorFor Elaine N. Marieb, taking the student's perspective into account has always been an integral part of her teaching style. Dr. Marieb began her teaching career at Springfield College, where she taught anatomy and physiology to physical education majors. She then joined the faculty of the Biological Science Division of Holyoke Community College after receiving her Ph.D. in zoology from the University of Massachusetts at Amherst. While teaching at Holyoke Community College, where many of her students were pursuing nursing degrees, she developed a desire to better understand the relationship between the scientific study of the human body and the clinical aspects of the nursing practice. To that end, while continuing to teach full time, Dr. Marieb pursued her nursing education, which culminated in a Master of Science degree with a clinical specialization in gerontology from the University of Massachusetts. It is this experience, along with stories from the field including those of former students, now in health careers that has informed the development of the unique perspective and accessibility for which her texts and laboratory manuals are known. In her ongoing commitment to students and her realization of the challenges they face, Dr. Marieb has given generously to provide opportunities for students to further their education. She contributes to the New Directions, New Careers Program at Holyoke Community College by providing several full-tuition scholarships each year for women returning to college after a hiatus or who are attending college for the first time and would otherwise be unable to continue with their studies without financial support. She funds the E. N. Marieb Science Research Awards at Mount Holyoke College, which promotes research by undergraduate science majors, and generously contributed to the University of Massachusetts at Amherst where she provided funding for reconstruction and instrumentation of a cutting-edge cytology research laboratory that bears her name. In 1994, Dr. Marieb received the Benefactor Award from the National Council for Resource Development, American Association of Community Colleges, which recognizes her ongoing sponsorship of student scholarships, faculty teaching awards, and other academic contributions to Holyoke Community College. In May 2000, the science building at Holyoke Community College was named in her honor. Additionally, while actively engaged as an author, Dr. Marieb serves as a consultant for the Benjamin Cummings Interactive Physiology CD-ROM series, and is an active member of the Human Anatomy and Physiology Society (HAPS), the American Association for the Advancement of Science (AAAS), and Sigma Xi. Susan J. Mitchell earned her Ph.D. in physiology from the University of Michigan. She studied the cellular basis of behavior before joining the faculty at Onondaga Community College where she is currently a professor in the Department of Biological Sciences. Her research in neurophysiology and training in physiology positioned her to write the original Nervous, Endocrine, and Digestive System modules in the Interactive Physiology 10-System Suite tutorial program. She has been honored with a NISOD Excellence Award for teaching, and been awarded several grants to develop technological resources for biology at OCC. Dr. Mitchell is a member of the American Physiological Society, National Association of Biology Teachers, National Science Teachers Association, and the Human Anatomy and Physiological Society (HAPS), where she is currently active on the Curriculum and Instruction Committee.
