Philip E. Cryer M.D. : Hypoglycemia in Diabetes: Pathophysiology, Prevalence, and Prevention before purchasing it in order to gage whether or not it would be worth my time, and all praised Hypoglycemia in Diabetes: Pathophysiology, Prevalence, and Prevention:

1 of 1 people found the following review helpful. The Granddaddy of HypoglycemiaBy Roberto V. IllaThis is a good book from the #1 expertin the field. However, it is limited to hypoglycemia in diabetes and limited to mainstream

thought. This is an important primer, and every doctor should read and understand it. What I have found to be hugely instructive over the years is hypoglycemia unawareness. This syndrome is missed by most practicing physicians. No mention is made, of course, of hypoglycemia in other disease states... such as Nesidioblastosis. The latter, I find, is about as common as Type 2 diabetes. See my book on .com "[...]" for more detail. Roberto Victor Illa, M.D. [...]

Iatrogenic hypoglycemia, or low blood glucose caused by medical treatment, is a challenge facing people with diabetes and their health care providers. Philip E. Cryer, MD a Banting Medal recipient and the Irene E. Michael M. Karl Professor of Endocrinology and Metabolism at Washington University in St. Louis examines this persistent problem from a pathophysiological perspective. Intended for diabetes researchers and medical professionals who work closely with patients with diabetes, *Hypoglycemia in Diabetes* provides direct insight into the causes and consequences of this serious medical condition from one of the foremost experts in the field. Based on the latest developments and trends in the scientific and medical literature, readers are given the details they need in order to be informed about how to identify, prevent, and treat this unfortunate circumstance of the diabetes care regimen. The second edition contains updated and expanded references from the latest research. The discussion of iatrogenic hypoglycemia has been expanded throughout to cover these new findings and to keep the discussion of the topic relevant.

About the Author A graduate of Northwestern University and its medical school with training in internal medicine at Barnes Hospital and in endocrinology and metabolism at Washington University, Philip E. Cryer has been a member of the faculty at Washington University in St. Louis since 1971. He served as program director of the General Clinical Research Center from 1978 to 2006 and as Director of the Division of Endocrinology, Diabetes and Metabolism from 1985 through 2002. He has been the Irene E. and Michael M. Karl Professor of Endocrinology and Metabolism in Medicine since 1995. A past president of the American Diabetes Association and a former editor of its leading journal, *Diabetes*, Dr. Cryer's research has been recognized by the Banting Medal for Scientific Achievement of the American Diabetes Association, the Claude Bernard Medal of the European Association for the Study of Diabetes, an honorary doctorate from the University of Copenhagen, and a MERIT award from the National Institutes of Health.
