Howard Shen : Illustrated Immunology Memory Cards: ImmunoMnemonics (Immunology Mnemonics) before purchasing it in order to gage whether or not it would be worth my time, and all praised Illustrated Immunology Memory Cards: ImmunoMnemonics (Immunology Mnemonics):

2 of 2 people found the following review helpful. AWESOME!!!By KellyreneeI got the notecards while studying for step 1 and I wish I had had them during the school year. Everyone I have shown them to loves them. The big thing is that these are to help you understand and grasp the overwhelming complexity that is immunology. Immunology is not easy. It might be if you are awesome at flat out memorization but I'm not.Woven throughout these notecards is a love story going on between the different cells of the immune cells. I'm sure that it isn't for everyone, but it's a great thing to use on a study night with a bunch of friends. It becomes exponentially more dirty the more medical students you add to the review session. There is a lot of pulling on legs to and exciting of the different cells. It finally made immunology stick for me instead of appearing to just be a bunch of random cells with these numbers on them. I'm not sure why the negative reviewers dislike them so much. They are repetitive, but that helps me learn the info, and different cells follow the same pathways so some cards may have very similar pathways described one after another.Bottom line is if you are okay with following the immune system cells on a journey of being... catfish, lovers, attack jet fighter, and lots of other fish, lobsters, etc get these cards. If you prefer the droll monotony of your immunology notes stick with them instead.6 of 6 people found the following review helpful. Howard Shen Has Done it Again!By devsfan46I was head over heels for the pharmnemonic series, so I bought these on a whim to help me brush up on immunology for the boards. I wish I had these cards when I originally had to learn these for Micro and Path. Full color cards with great memory tools for those tedious CD proteins and interleukins... great mnemonics for the autoimmune diseases, complement pathways, hypersensitivities, as well as a plethora of cards detailing all of the "players" of the immune system.This has been a real help studying for the boards.The quality of the paper on which the cards are printed is not as good as the pharmnemonics, but having all of the cards in full color more than makes up for it.3 of 3 people found the following review helpful. Awesome Learning Tool !!!By DanI couldn't have made it through Immuno without these cards !! Highly recommended !They are very well organized and the goofy animations / stories really help you

remember otherwise dry and confusing material. They don't go in to great detail on the molecular biology of immuno, but it makes sense of the big picture and how all the parts work together.... Makes an excellent companion to the text.

Printed in full color, this set of 129 ImmunoMnemonics cards makes Immunology fun to learn, clear to understand, and easy to memorize by using cartoons, mnemonics, analogues, humor, outline format, tables and flowcharts. Intended to serve as a memory aid for learning Immunology, either for the courses or the board exams.
