K.E.K. Rowson, B.W.J. Mahy : Lactic Dehydrogenase Virus (Virology Monographs Die Virusforschung in Einzeldarstellungen) before purchasing it in order to gage whether or not it would be worth my time, and all praised Lactic Dehydrogenase Virus (Virology Monographs Die Virusforschung in Einzeldarstellungen):

2 D. Immunological Response	78	1. Thymectomy in LDV Infection	81
Effect of LDV Infection on Immune Response to Various Antigenic Stimuli.	82	E. Tumour Growth	87
F. Histological Changes 91		VII. Ecology	97
VIII. Laboratory Methods.	100	A. Blood Samples from Mice for LDH Estimation	100
B. Estimation of Plasma LDH Activity	101	1. Quantitative Methods.	101
a) Determination of Plasma LDH by Spectrophotometric Method (Backward Reaction)	101	b) Determination of Plasma LDH by Spectrophotometric Method (Forward Reaction)	102
c) Determination of Plasma LDH by Colorimetric Method	103	2. Qualitative Method.	103
3. Units of LDH Activity	104	C. Diagnosis of LDV Infection in Mice.	105
D. Virus Titration.	105	References.	106

We wish to express our thanks to our many colleagues who generously provided us with preprints of their work, and unpublished observations. We are particularly indebted to those who donated prints of their electron micrographs of the virus. I. Introduction Inapparent virus infections of experimental animals and tissue culture systems present to the investigator a problem which it is impossible to overcome completely. Although all recognised viruses can be excluded from an experimental system, previously unsuspected viruses causing no obvious effects ('silent' viruses) will continue to be discovered. A truly silent virus would replicate, causing no change in its host cell, damage to infected tissue or immune response and would presumably be of no consequence.
