Samuel Randall Detwiler : Neuroembryology;; An experimental study, (Experimental biology monographs) before purchasing it in order to gage whether or not it would be worth my time, and all praised Neuroembryology;; An experimental study, (Experimental biology monographs):

It is not the purpose of this monograph to discuss all of the complicated problems associated with the study of neuroembryology. This subject has so many phases that anything approaching an adequate treatment of any of them would readily form the subject matter of an entire volume. Consequently, an attempt will be made to consider only certain lines of experimentation as they bear upon the later aspects of development and differentiation within the nervous system.
