Impressive presentation by DarwinBy edprochakThough at times the volume of facts that are presented seemed overwhelming,I had to remind myself of the difficulties Darwin faced in expounding his new theory. Still more impressive are the arguments he makes that anticipated some of the modern attacks of creationism. I am glad to have read this classic book of the biological sciences.1 of 1 people found the following review helpful. Great Edition of a Great BookBy Brandon CoxI liked this book. People who are interested in historical books should be interested in reading this book... One of the things that was especially interesting is the author's writing style and ability to get his message across. Overall, this book was very well written and I highly recommend to those who have not read. To those who have read it - read it again!0 of 0 people found the following

review helpful. Fortunately, Darwin was a gifted writer. By Graham H. Seibert. This classic needs no introduction. It is mandatory reading for anyone pretending to know anything about the life sciences. Fortunately, Darwin was a gifted writer. It is very accessible. There is ample human interest in his personal experiences, whether sailing around the world on the HMS Beagle, exchanging correspondence with the leading minds of his day, or engaging his ever-curious mind in conversation with all whom he encountered in life. Don't be afraid to give it to adolescents. I found a musty old volume in the UC Berkeley library at the age of fifteen and was fascinated. It is now, via and the Internet, much more accessible. Do it!

About the Author Charles Darwin was an English naturalist and author best-known for his revolutionary theories on the origin of species, human evolution, and natural selection. A life-long interest in the natural world led Darwin to neglect his medical studies and instead embark on a five-year scientific voyage on the HMS Beagle, where he established his reputation as a geologist and gathered much of the evidence that fuelled his later theories. A prolific writer, Darwin's most famous published works include *The Voyage of the Beagle*, *On the Origin of Species*, *The Descent of Man*, and *Selection in Relation to Sex*, and *The Expression of Emotions in Man and Animals*. Darwin died in 1882, and in recognition of his contributions to science, is buried in Westminster Abbey along with John Herschel and Isaac Newton.
