Barbara Ann Centeno, Edward B. Stelow, Martha Bishop Pitman : Pancreatic Cytohistology (Cytohistology of Small Tissue Samples) before purchasing it in order to gage whether or not it would be worth my time, and all praised Pancreatic Cytohistology (Cytohistology of Small Tissue Samples):

Each volume in this richly illustrated series, sponsored by the Papanicolaou Society of Cytopathology, provides an organ-based approach to the cytologic and histologic diagnosis of small tissue samples including fine-needle aspiration biopsy, cell block samples and core, pinch and forceps biopsies. This volume provides a practical approach to preparing and assessing pancreatic aspiration, core biopsy and brushing samples. Benign, pre-malignant and malignant entities are presented in a well-organized and standardized format supported with high-resolution colour photomicrographs, tables, tabulated specific morphologic criteria and appropriate ancillary testing algorithms. Example vignettes allow the reader to assimilate the diagnostic principles in a case-based format. This unique series

strengthens the bridge between surgical pathology and cytopathology, providing the pathologist with the ability to diagnose small tissue samples with confidence. The CD-ROM packaged with the printed book contains all the images in a downloadable format, making this a valuable resource for practicing and trainee pathologists.
