Maysaa El Sayed Zaki : Parvovirus B19 and Hematological Disorders in Children (Virology Research Progress) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Parvovirus B19 and Hematological Disorders in Children (Virology Research Progress):

Parvovirus B19 is a childhood infectious disease of global proportions. It is the leading cause of erythema infectiosum, affecting mainly young age children. This new book outlines the recent advances in understanding Parvovirus infections in children particularly associated haematological consequences. Also, it describes the associated complications by in utero infection such as hydropes fetalis and acute leukaemia. It has emerged as an occupational viral infection both to health care workers and school workers. It carries the danger of serious infection of recipients of blood and blood products transfusion.
