It's enjoying to test yourself after you study a specific organ system.Features of this book:1. This book is thoroughly page-referenced to Cotran, Kumar Robbins: Robbins Pathologic Basis of Disease, 5th Ed.2. Variety of MCQs (over 1400) covering wide range of topics.3. Each chapter has many picture MCQs which are black and white, showing gross and microscopic specimens.4. Very good explanations at the end of each chapter with their references.5. Some of the MCQs options include (All of the above) and (None of the above) which are obsolete type of options.6. The types of questions used are: Single-best-answer, True/ False type (which almost never come in the USMLE !), matching, and one, two, neither, or both (which are often difficult).7. Unfortunately many MCQs come in the form of (All the following are true about ... EXCEPT) which is not what you face if you want to solve real USMLE-type questions.8. Contents include:General Pathology, Pediatric Genetic Diseases, Nutritional Environmental Diseases, Infectious Diseases, Cardiovascular , Respiratory, Hematopoeitic lymphoid, GI tract, liver Biliary tree Pancreas, Kidney urinary tract, Reproductive, Breast, Skin, Endocrine, Musculoskeletal, and Nervous system.9. This book comes in 239 pages, published by W. B. Saunders; 4th edition (1995).2 of 4 people found the following review helpful. Great for test prep.By Raynette KaneshiroThis book was invaluable for the AAPA Pathologist's Assistance Fellowship Exam. Not only does it give numerous Robbin's based questions for practice, it also helps focus on

important areas, giving extended answers with explanations and page #s for review.

Revised to contain questions that conform to the National Board guidelines, this manual can be used as an adjunct or on its own for course/board preparations. It provides questions and answers for such topics as pediatric and genetic diseases, infectious diseases, and the various body systems.
