A new edition of the companion volume to "Pharmacotherapy: A Pathophysiologic Approach". It features a problem-solving approach, providing over 100 case studies that require the reader to critically think, research and evaluate each case. Accompanying exercises provide practice in identifying findings and assessments, desired outcomes, therapeutic

alternatives, optimal plans, assessment parameters and patient counselling recommendations. The edition includes more complex patient cases including those with multiple disease states and drug-related problems. Modern topics include obesity, herpes simplex and smoking cessation.

From the Back Cover *Pharmacotherapy: A Patient Focused Approach, 2/e* builds on the strengths of the popular first edition. Using a consistent, problem-solving approach, this edition helps readers enhance their pharmacotherapeutic skills. Drawing upon the expertise of over 160 authors, the casebook contains general principles of drug therapy decision-making and actual patient cases related to multiple organ systems, infectious diseases, oncologic disorders, and nutritional disorders. Designed to complement *Pharmacotherapy: A Pathophysiologic Approach, 4/e*, this is an excellent learning tool for educational programs and a valuable resource for independent study and staff development.
